

As an XM & Sirius Satellite radio subscriber and a person that makes a living dealing with terrestrial radio , I am VEHEMENTLY opposed to any FCC interference with satellite programming. The Telecommunications Act of 1996 has essentially taken the airwaves from the public and awarded it to the highest bidder in any given market. Now satellite radio, which I choose to PAY for is MINE! Don't mess with it! Government meddling in broadcasting caused the total homogenization of of terrestrial radio...haven't you done enough already?
